

eIDAS-Compliant Platform for Electronic Remote Signing

Paperless, flexible, digital solution by Cryptomathic and ESYSCO

Signer

Cryptomathic's Signer is an eIDAS-certified digital signature solution for remote signing – delivering the highest assurance level with Qualified Electronic Signatures (QES) for organizations to provide legally binding digital signature services to clients and end-users at a large scale. The solution is implemented at various industries, e.g. banks and government departments processing millions of transactions each month across Europe. The solution combines strong security with user convenience by using “what you see is what you sign” (WYSIWYS) technology that provides non-repudiation and enhances customer trust.

Remote Signing Platform

ESYSCO developed a modern and state of the art Remote Signing Platform offered to individuals as well as business customers. The platform integrates seamlessly with Cryptomathic Signer and supports two deployment models:

- **SIGNIUS Professional** - a fully managed, simple, and convenient cloud service for users who want to sign documents with a Qualified or Advanced Electronic Signature instantly and in a legally binding way.
- **SIGNIUS Enterprise** - a comprehensive platform for Digital Contract Management, Qualified Electronic Signing and KYC, CFT & AML compliant Remote Customer Identification - offered in different deployment options: fully managed, hybrid and on-premise.

A simple, fast and convenient way to sign documents remotely

Solution benefits

- **Fully digital customer journey** - users can sign documents in a single online process with legally binding Qualified Electronic Signatures – anytime, anywhere.
- **Enhanced user experience** - simple, fast and convenient signing process with user-friendly interface.
- **Protection of sensitive data** - authenticity, integrity and non-repudiation with WYSIWYS functionality.
- **eIDAS-compliant AdES & QES provided** - in cooperation with a Qualified Trust Service Provider.
- **One-stop-shop solution** - flexible design of document and signing workflows.
- **Initial and operational cost reduction** - no additional hardware required (e.g. leverage existing 2FA mechanisms).
- **Paperless and eco-friendly process** - minimize the carbon footprint of paper consumption, physical document distribution, management and archiving.
- **Higher sales conversion in B2C and B2B transactions** – shorter, faster and simplified process of finalizing and signing contracts.

User journey

5 minutes and 5 steps - signing made as simple as possible!

- 1. Document**
The user chooses one or more document(s) to sign and uploads it to the application.
- 2. Video identification ***
The initial and quick user onboarding process verifies your customer identity based on an ID card or passport. Results of identification are available immediately.
- 3. 2FA confirmation**
Strong authentication – the user provides a one-time passcode to confirm his identity.
- 4. Remote signature**
The document is automatically signed with an Electronic Signature.
- 5. Signed document**
Once the user has completed the transaction, the signed document is ready for download and automatically sent to the provided e-mail address.

* Video identification is an initial and one-time onboarding process.
After confirming user's identity, signing process takes just one minute.

Main Features

eIDAS-compliant Remote Signing Services

Whether it's qualified or advanced, one-time, short-lived or long-term certificates for signatures and seals – all options are fully supported in order to meet operational and business requirements set by enterprises and trust service providers. Additional services like qualified time-stamping and signature validation services are also available.

Signature Portal

Designed with a focus on usability, highest user convenience, speed and security, the SIGNIUS Enterprise signature portal provides a comprehensive platform to digitally sign, manage and share documents across all parties involved in the signing process.

Document & Workflow management

Incorporating a signature process into existing document workflows of an organization has become mandatory. With its open integration interfaces towards most DCM, ECM & BPM Systems, SIGNIUS Enterprise fully supports existing document workflows within an organization.

Support for Multiple Identity Providers

An open and modular architecture makes the integration between a variety of Identity Providers and the signature platform as smooth as possible.

Flexible deployment options

Driven by different commercial, organizational and security requirements, SIGNIUS Enterprise can be deployed in three different modes: on-premise, hybrid and in the cloud.

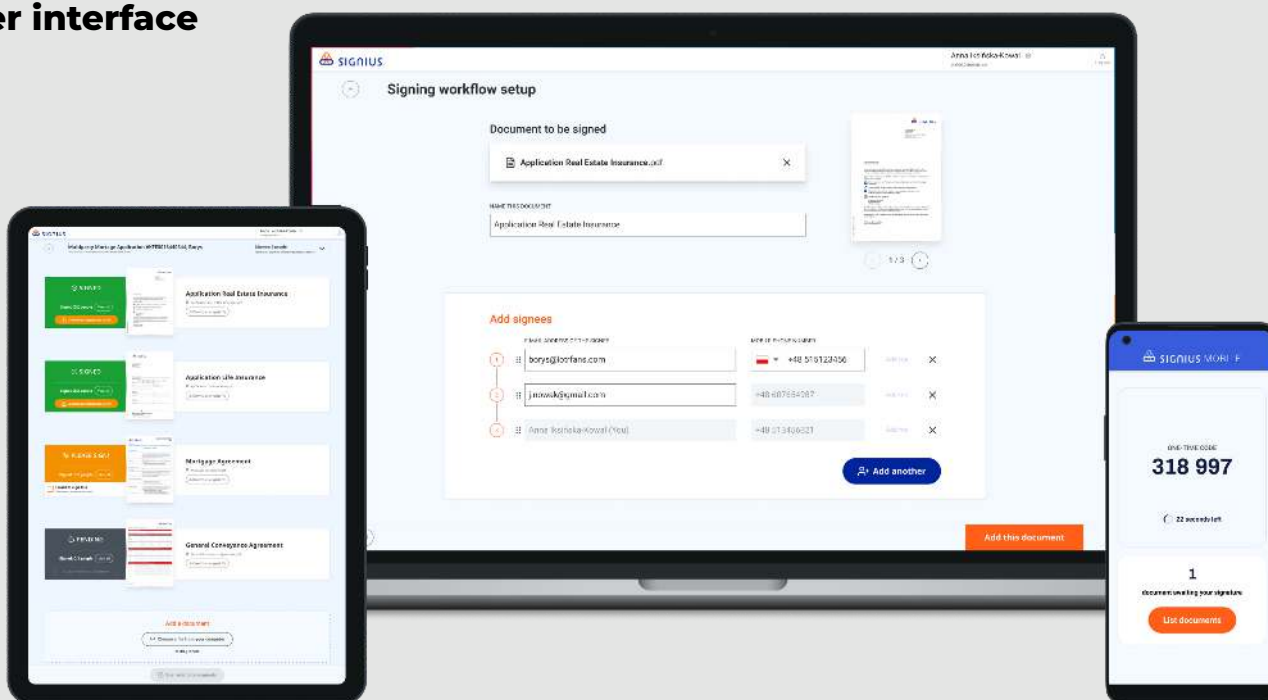

Signing documents with your mobile device

In today's ever-changing world, mobility is a key factor to stay ahead of competition and develop your business further. SIGNIUS Mobile gives you the right tool to sign contracts of any kind whenever time is of the essence.
